ALPHA OS

Uhlelo lokusebenza lwenkampani yakwa-777 Software —— umshini wakho ulalela wena.

Incwadi yomsebenzisi · November 2026

Mahhala kuze kube phakade · Ayikho i-akhawunti · Akukho ukulandelela

Ushicilelo lokuqala — November 2026.I-ALPHA OS RC1 ikhululiwe — njengesithombe sediski somshini obonakalayo (bheka isexwayiso ekuqaleni kwesahluko 2). Le ncwadi ichaza i-RC1, inguqulo eyakhiwa futhi yafakazelwa elabhu ye-777 Software, nohlelo njengoba luzokhula ngamaphakeji alo esevisi. Lapho isici sisakhiwa, le ncwadi ikusho ngamagama alula. Akukho okuthembiswa lapha okudlula lokho okufakazelwe.

1 — Wamkelekile

I-ALPHA OS uhlelo lokusebenza oluphelele lwekhompuyutha yakho, lwakhiwe ngendlela yakwa-777: umshini wakho ulalela wena — hhayi i-akhawunti oyibolekile, hhayi abakhangisi, hhayi noma ngubani oqoqa izingcezu zempilo yakho. Ime phezu kwesisekelo seLinux esiqinile (Fedora Atomic), igqoka ubuso be-Enclave, futhi isebenzisa isoftware osuvele unayo.

Igama elithi ALPHA likhethwe nguKim Jesse — uKim ofanayo owaqamba i-777 Software. Uphawu luwufihlo oluphelele lwenyanga: idiski elimnyama elinomqhele womlilo, ukukhanya kusachitheka emaphethelweni. Ukukhanya kokuqala — futhi ubumnyama abuseze banqoba.

I-ALPHA OS mahhala kuze kube phakade — ayikho intengo, akukho ukukhangisa, akukho ukuzanywa, akho isigaba sokuqala esikhokhelwayo. Ayikho i-akhawunti, futhi akukho ukulandelela. Ayisoze yabika ngawe kunoma ubani — ngoba ayikho "indlu" engabika kuyo: i-777 Software ayiphethi lutho futhi ayiqoqi lutho.

Le ncwadi ibhalelwe wonke umuntu — owake wafaka uhlelo lokusebenza, nalowo ochwepheshe odinga imininingwane. Zonke izici ziyazichaza ngaphakathi kohlelo: beka igundane phezu kwanoma iyiphi inketho noma uyigxilise, futhi incazelo yayo izotshela ngamazwi acacile ukuthi iyini, yenzani, nokuthi kwenzekani uma uyishintsha. Inketho engenancazelo, ngokomthetho walendlu, iyiphutha.

2 — Ukufaka i-ALPHA OS

Ngaphambi kokuba uqale

- Yenza ikhophi yamafayela akho. Ukufaka uhlelo lokusebenza kuwumsebenzi obucayi; amadokhumenti akho, izithombe nomculo wakho kufanelwe ikhophi endaweni ephephile ngaphambi kokuthi kuqale noma yini.
- Bheka ikhasi lokukhulula (777software.net/alpha-os/) ukuze uthole usayizi oqondile wokulanda kanye ne-hash yalo ye-sha256 — usayizi uhlala uphrintiwe eduze ne-hash. Qinisekisa i-hash yalokho okudawunilodile ngaphambi kokufaka.
- Okudawunilodayo kufika ngezingcezu eziqhubekayo, ngakho uxhumano oluhamba kancane noma oluphazamisekile alulahlekelwa yilutho — ngisho nemodemu ye-56k ingakuthwala, ingcezu ngengcezu, kuze kube sekupheleni.

ALPHA OS RC1 — SICELA UFUNDE NGAPHAMBI KOKUFAKA LUTHO

I-RC1 iyini namuhla: isithombe sediski esigcwele somshini obonakalayo. Usisebenzisa ngaphakathi kohlelo olunjengo-QEMU/KVM, i-VirtualBox, noma i-VMware, phezu kohlelo osuvele unalo. Uhlelo lwakho olukhona luhlala lunje ngqo.

I-RC1 akuyona ini: akusiye ufaki, futhi ayilungisi i-dual-boot. I-RC1 ayikwazi ukuzifaka eduze kohlelo lwakho olukhona.

Okungafanele ukwenze: ungalokothi ubhale isithombe se-RC1 kudrayivu yangempela — hhayi nge-dd, i-balenaEtcher, i-Rufus, nanoma yiliphi ithuluzi lokubhala isithombe, futhi ungalokothi ubhale kudrayivu ikhompyutha yakho eqala ngayo. Isithombe sediski singena esikhundleni sayoyonke idrayivu esibhalwa kuyo. Uma usibhala kudrayivu yakho enkulu, sizosusa uhlelo lwakho lwe-Windows noma lwe-Linux olukhona kanye namafayela akho.

Uma ufuna i-ALPHA emshinini wangempela namuhla: sebenzisa idrayivu ehlukile, eyisipele, engenalutho ofuna ukulugcina.

Isithembiso sethu: uhlelo lokufaka oluphephile lwe-dual-boot luyenziwa — luzokukhombisa umshini wakho ngamagama alula, lufake i-ALPHA kuphela esikhaleni

osivumele, futhi lushiye uhlelo lwakho olukhona lukwazi ukuqala futhi lungathintwanga. I-ALPHA OS ngeke isho ukuthi iphephile ku-dual-boot kuze kube lolo hlelo lukhona futhi lufakazelwe, isivivinyo ngesivivinyo. Kuze kube yileso sikhathi, umshini obonakalayo uyindlela ephephile, futhi uyindlela enhle.

Ukufaka, isinyathelo ngesinyathelo

- I-RC1 namuhla isebenza emshinini obonakalayo: hlanganisa izingcezu, hlola i-hash, ucindezele kabusha, bese ulayisha isithombe ku-QEMU/KVM, VirtualBox, noma VMware — ikhasi lokukhulula (777software.net/alpha-os/) likuhambisa kukho. Ungalokothi ubhale isithombe kudrayivu yangempela.
- Khetha ulimi lwakho. Ukukhetha kwakho kuyakhunjulwa — uhlelo olufakiwe luzovuleka ngalolo limi, futhi konke ku-ALPHA OS kuzokhuluma ngalo.
- Lapho i-ALPHA izohlala khona ukukhetha okuzonikezwa isifaki esizayo — idiski yonke, noma eduze kohlelo olukhona. I-RC1 uqobo ayinikeli lokho kukhetha: isithombe sediski esiphelele esisebenza emshinini obonakalayo.
- Dala i-akhawunti yakho bese usetha iphasiwedi yakho. Wena uyayisetha; akekho omunye oyoke ayazi.
- Qala umshini obonakalayo. Ukuvuka kokuqala kukuletha, ngokudlula ekusetheni, edeskithophini yakho entsha.

Isimo esiqotho:I-RC1 ikhululiwe — njengesithombe sediski somshini obonakalayo, ngqo njengoba isexwayiso ekuqaleni kwalesi sahluko sisho. Isifaki esiphephile se-dual-boot siyenziwa; lapho sikhululwa futhi sifakazelwa, lesi sahluko sizobuyekezwa.

3 — Ukuvuka kokuqala ne-akhawunti yakho

Ekuvukeni kokuqala, i-ALPHA OS ikwamukela ngolimi olukhethile futhi ivule imodi emnyama (okuzenzakalelayo kwendlu — imodi ekhanyayo ikhona kuzilungiselelo, futhi ukukhetha kwakho kuyalawula). Ideskithophu inophawu lwe-ECLIPSE: ufihlo lukaKim lwenyanga ngaphezu kwephiramidi likaSteven — uphawu oluhlanganisiwe lwendlu.

Ngemuva kwezigcawu, ukusetha kokuqala kudala isisekelo sakho sokuqala — indawo yegolide yokubuyisela yesistimu yakho entsha (bheka Isigaba 7) — ukuze kusukela ngosuku lwakho lokuqala uhlale unendlela yokubuyela ekhaya.

I-akhawunti yakho ngeyakho wedwa. Ayikho i-akhawunti yakwa-777 Software, akukho ukungena kunoma iyiphi iseva, futhi akukho lutho lokuvula. Umshini ungowakho nje.

4 — Ideskithophu: amaphephadonga, izilungiselelo namafonti

Iphephadonga

- Izilungiselelo → Iphephadonga: ngokucofa kanye, ngokubuka kuqala, khetha noma yisiphi isithombe esisemshinini wakho njengephephadonga lakho. I-PNG, i-JPG ne-WebP zonke ziyasebenza.
- Umbukiso oshelelayo: khomba iphephadonga kufolda yezithombe zakho, futhi ideskithophu izozijikeleza — njalo ngemizuzu emi-5, imizuzu eyi-15, ihora ngalinye, nsuku zonke, noma ekungeneni ngakunye; ngokulandelana noma ngokushova. Igalari yakho ngeyakho: uhlelo luyayibonisa kuphela — akukho okunye. Ayisoze yalilayisha noma lalifaka ndawo.
- Kufika isethi eyakhelwe ngaphakathi yobuciko bendlu, kuhlanganise nephephadonga lesiginesha i-ECLIPSE nezingcezu zayo ezihambisanayo.

Izilungiselelo ezikuhloniphayo

Izilungiselelo ezicacile zihlala phezulu, zibhalelwe wonke umuntu; isigaba esithuthukile singezansi sithwala ukujula kwabazi kahle. Isilungiselelo ngasinye osenzayo siyakhunjulwa — ngaphesheya kokuvuka kabusha nokuthuthukiswa — futhi uhlelo abusoze balisetha kabusha buthule. Okwakho kuhlala kungokwakho.

Amafonti

I-ALPHA OS ihambisa iphakethe lamafonti elikhethiwe: amafonti obuso besixhumanisi, amafonti okubonisa ezihloko nesikrini sokungena, kanye namafonti anemigqa elinganayo etheminali. Izilungiselelo → Amafonti ashintsha ngokushesha, ohlelweni lonke, ngokubuka kuqala bukhoma. Ifonti ngalinye elikuphakeji lidlule isango lendlu le-100% lokuba semthethweni: umbhalo welayisense yalo nomthombo walo kuyaqoshwa, futhi kuhlanganiswa kuphakeji. Ifonti yokubonisa eyakhiwe yindlu uqobo (igama lokusebenza: ECLIPSE) isathuthukiswa.

5 — Iminyango: ukufinyelela i-ALPHA kusuka kwenye idivayisi

Ungafinyelela ideskithophu yakho ye-ALPHA kusuka kwamanye amadivayisi akho — kusukela kwi-laptop ngaphesheya kwegumbi, noma kwithebhulethi esofeni — ngezinhlelo zokusebenza zedeskithophu ekude osuvele uzazi. Indlela ngayinye iyizinyathelo ezintathu, kungenjalo iyiphutha: xhuma, ngena, ideskithophu. Wonke umnyango ubethelwe, futhi wonke umnyango ubuza ukuthi ungubani. Ukuhambisana akusho ukungabi nokuqinisekisa.

QDESK (ideskithophu ekude yendlu)

- Vula i-QDESK kwenye idivayisi yakho. 2. Faka ikheli lomshini we-ALPHA. 3. Faka i-PIN ye-QDESK — i-PIN efanayo neye-QDESK ngayinye yendlu. Ubona ideskithophu yakho. Umsindo uhamba nawe, utholakala ngokuzenzakalelayo.

RDP (uhlelo olwakhelwe ngaphakathi ku-Windows, namaklayenti e-RDP yonke indawo)

- Vula uhlelo lwedeskithophu ekude. 2. Faka ikheli lomshini. 3. Ngena ngegama lakho lomsebenzisi le-ALPHA nephasiwedi yakho.

Ngomsindo, kushiwo ngokuqondile:ekwakhiweni kwamanje kwelabhu, iseshini ye-RDP ayikawuthwali umsindo — imojuli yomsindo yayo ayitholakali emithonjeni yesoftware yalesi sithombe. Amaseshini e-QDESK ne-RustDesk awuthwala umsindo. Kubhalwe lapha ukuze ungaze uqagele.

VNC (noma isiphi isibuki esijwayelekile se-VNC)

- Vula isibuki sakho se-VNC. 2. Faka ikheli lomshini. 3. Ngena nge-akhawunti yakho. Ishaneli ibethelwe (i-TLS esekelwe esitifiketini) — isibuki esingakwazi i-VNC ebethelwe ngeke singene.

I-VNC, njengephrothokholi, ayithwali umsindo nhlobo — lokho kuwumkhawulo we-VNC uqobo, hhayi we-ALPHA OS. Ukuze uthole iseshini enomsindo, sebenzisa i-QDESK noma i-RustDesk.

RustDesk (ideskithophu ekude yomthombo ovulekile)

- Vula i-RustDesk. 2. Faka i-ID ye-RustDesk yomshini we-ALPHA. 3. Faka iphasiwedi yakho. Ukubethela kwakhelwe ngaphakathi, nomsindo uvuliwe.

SSH (umugqa womyalo)

Ngomsebenzi wetheminali, i-SSH ingena ngezihluthulelo kuphela: awekho amaphasiwedi amukelwayo. Gcina isihluthulelo sakho esiyimfihlo siyimfihlo; siyingxenye yonke yalowo mnyango.

6 — Izinhlelo zakho zokusebenza

I-ALPHA OS ifika nezinhlelo zendlu sezifakiwe — ngayinye mahhala kuze kube phakade, ngayinye ifakazelwe ukuqalisa ekwakhiweni kwelabhu.

- QDROP — thumela amafayela ngqo phakathi kwemishini yakho, ngaphandle kwefu phakathi.
- Enclave Bible — iBhayibheli lonke, ngolimi lwakho, lizofundwa ngokuzwakalayo.
- Teachings of Jesus — amazwi Akhe, aqoqwe futhi aseshekayo.
- Bible Trivia — imibuzo eyi-171 yokufunda ngokudlala.
- VOIDAMP — isidlali somculo sendlu. Ucindezela u-Dlala okokuqala: 77.7FM Pirate Radio; umculo wakho uhlala ungumphathi.
- OSINT — bona ukuthi i-inthanethi evulekile yazi ini, bese uzivikele.
- AEGIS — amakhophi angasusi lutho. Ukulahlwa njalo kuyisinqumo somsebenzisi.

- Machine Report — umbiko wezempilo wekhompuyutha yakho ngamazwi acacile; okuthumelayo kunomugqa wendlu owuthi "wenziwe ngu".
- Keys of the Kingdom — funda ukuthayipha, mahhala kuze kube phakade.
- DB Console — izizindalwazi zakho, ngenethi yokuphepha ngaphansi kwalo lonke ushintsho.
- Google Chrome ne-Steam nazo zihamba — isiphequluli sakho nelabhulali yakho yemidlalo. E-labhu, umshini awunayo ikhadi lemifanekiso elidlulayo, ngakho i-Steam lapho ngeyelabhulali nemidlalo elula; i-3D esindayo ilinde ikhadi lemifanekiso langempela.

Igebe elishiwo ngamagama — QChat:ingxoxo ye-Enclave uqobo iyapakishwa ukuze ingene ku-ALPHA manje, futhi izohlala ngesinyathelo esilandelayo. Ukuxhumana kwayo kuzohamba ngepayipi le-Q — ngqo kuqala (STUN), ukudluliswa kuphela njengokugcina, kuvalwe ekugcineni kuya ekugcineni — futhi ukwakhiwa okuhanjiswayo akusoze kwathembela kunoma iyiphi iseva yendlu. Sisho igebe ngamagama esikhundleni sokwenza sengathi uhlelo lukhona.

7 — Isikhungo Sezokuphepha

Isithonjana esisodwa sivula konke ukuvikela kwakho: Isikhungo Sezokuphepha se-ALPHA. Siqulathe ideshibhodi, i-antivirus yokungathembi lutho, i-firewall yokungathembi lutho, izibalo, umdali wezisekelo, namawijethi edeskithophu. Konke kusebenza emshinini wakho futhi kuhlala emshinini wakho — ayikho i-akhawunti, akukho ukulandelela, akubiki ndawo. Isikhungo Sezokuphepha siphila ngomthetho ofanayo wokungathembi lutho esiwuphoqelelayo.

Imfundiso, ngamazwi acacile

Akukho lutho emshinini oluthembwa ngokuzenzakalelayo. Ifayela ngalinye AKWAZIWA kuze kube yilapho injini iliskena lihlanzekile. Uhlelo ngalunye kufanele luzuze uxhumano lwalo lwenethiwekhi — akukho xhumano olunikezwa buthule. Futhi isinqumo ngasinye sisho isizathu saso: ifayela LIsolisayo ngenxa yesignesha eshiwo ngamagama, umthetho wobuhlakani oshiwo ngamagama, noma ukuziphatha okushiwo ngamagama — hhayi ngenxa yelebula elibomvu elingenalutho.

Ideshibhodi

Uvikekile noma awuvikelekile, ngamazwi acacile: ingabe i-antivirus ingeyakamuva? Ingabe i-firewall iyabuka? Ingabe izibuyekezo zifakiwe? Ukuskena kokugcina kwakunini? Isikrini esisodwa, akukho donga lamagama obuchwepheshe.

I-Antivirus Yokungathembi Lutho

- Izinqumo: Kuphephile (kuskenwe kwahlanzeka) · Kusolisayo (kumakiwe — isizathu sihlala sishiwo) · Kubanjelwe (kubanjwe egumbini elikhiyiwe; ukubuyisela noma ukubamba kuyisinqumo sakho) · Akwaziwa (akukasikenwa — isimo sokuqala sakho

konke).

- Ukuskena: sebenzisa noma kunini (ifolda yasekhaya, umshini wonke, noma indawo oyikhethayo), noma usethe ishejuli ukuze izenzekele yona.
- Ukubanjelwa akusoze kwasusa. Uhlelo luyabamba; umsebenzisi uyalahla. Akukho "susa" nhlobo ku-antivirus.
- Izincazelo: injini yi-ClamAV, injini evulekile ejwayelekile embonini; izincazelo zayo zesignesha zizivuselela zona, futhi ideshibhodi ibonisa ngokucacile ukuthi zintsha kangakanani.

Isimo selabhu:i-antivirus yakhiwe, futhi indlela yayo yokuskena ifakazelwe esivakashini selabhu — kuhlanganise nendlela yayo yokubanjelwa nokubuyisela. Ubufakazi bayo bokugcina bezithombe phakathi kwesivakashi buqedwa kulesi sinyathelo.

I-Firewall Yokungathembi Lutho

Ubuso be-firewall ibhodi lokuxhumana elibukhoma: lonke uxhumano lwehlelo ngalunye — uhlelo luni, luya kuphi, kusukela nini — lubhalwa phansi ngamazwi acacile, nomlando ophelele, osearchwayo ongaphumi emshinini wakho. Ukuxhumana okuya kubalandeleli abaziwayo nasezindaweni zemalware kuyamakwa ebhodini.

Ngokuvimbela, kushiwo ngokuqondile:le firewall yokukhulula iyabuka — iyabona futhi ikubonisa konke, futhi ibhodi liyakusho lokho ngamazwi acacile. Ukuvimbela — imithetho yokuvumela/yokuvimbela ngohlelo ngalunye, imibuzo yoxhumano lokuqala, nokwenqaba okuzenzakalelayo kokuxhumana okungenayo okungacelwanga — kuza kuphela nesigaba sokuphoqelela sesikhathi esizayo, esifakazelwe ku-sandbox, futhi lapho kufika, ibhodi lizokusho. I-firewall ethi iyavimbela ingavimbeli iyiphutha elingenakuthethelelwa kulendlu; sikhetha ukukutshela iqiniso.

Izibalo

Indaba yokuphepha yomshini wakho ngezinombolo, igcinwe endaweni: amafayela askeniwe — mangaki Aphephile, mangaki Asolisayo (ngalinye lifakwa ohlwini ngesizathu salo esishiwo), mangaki Abanjelwe, mangaki asengu-Akwaziwa; izinombolo zokuxhumana nezinhlelo ezikhuluma kakhulu; impilo yesistimu (i-CPU, inkumbulo, amadiski ngamagama, amazinga okushisa lapho izinzwa zangempela zikhona khona — lapho zingekho, iphaneli ithi "ayitholakali kulo mshini", ingasoze yasungula inombolo). Ungathumela isifinyezo ngamazwi acacile noma nini; okuthunyelwayo kunomugqa wendlu owuthi "wenziwe ngu". Akukho lutho olusoze lwathunyelwa ndawo.

Izisekelo — indlela yakho yokubuyela ekhaya

- Dala: ngokuchofoza kanye, thatha isithombe esinamagama, esinadethi, esiqinisekiswe nge-hash sesistimu — uhlelo lokusebenza, izilungiselelo zalo, nesimo sesistimu. Usayizi uboniswa ngaphambi kokuba uqinisekise.
- Eyokuqala ngeyegolide:ekusetheni kokuqala, i-ALPHA OS idala isisekelo segolide sefektri ngokuzenzakalelayo, ukuze indlela yokubuyela ekhaya ibe khona kusukela

ngosuku lokuqala.

- Buyisela emuva: khetha isisekelo, funda isiqinisekiso esibhalwe ngamazwi acacile — sizobuyisani, futhi yiziphi izinguquko ezilandelayo ezizohlehla — futhi umshini uqinisekisa i-hash yaleso sisekelo ngaphambi kokusisebenzisa; isisekelo esingaphumeleli i-hash yaso asisoze sasetshenziswa.
- Amafayela akho aphephile: ukubuyisela emuva kwesistimu akusoze kwathinta amafayela akho — amadokhumenti, izithombe nomculo asisoze aba yintengo yokulungisa isistimu. (Ungakhetha futhi, ngamabomu, isisekelo esigcwele esihlanganisa ifolda yasekhaya; ukukhetha kungokwakho, futhi kuchazwa ngamazwi acacile ngesikhathi sokudala.)
- Akusoze kwasuswa ngokuzenzakalelayo: izisekelo ngezakho. Uma isikhala sediski sincane, isikhungo sizokusho futhi sikuvumele ukhethe — asisoze sanquma inethi yakho yokuphepha buthule.

Ubufakazi:injini yezisekelo iphumelele ubufakazi belabhu esivakashini — dala → shintsha → buyisela emuva → isimo siyafana, kuqinisekiswa nge-hash, nefayela elidalwe ngemva kwesisekelo lisekhona (alisuswa) — njengoba kuyisithembiso.

Amawijethi — engeza ngokucofa, ungalokothi ngokucofa kwesokudla

Amawijethi edeskithophu aphathwa ngendlela yokucindezela, ngoba lendlu iklama kokubili umuntu osethebhulethini nomuntu osedeski. Akukho senzo sewijethi esidinga ukucofa kwesokudla — akukho nasinye.

- Uhlelo lwamawijethi (kugridi yezinhlelo) lubala iwijethi ngayinye enenkinobho enkulu ethi + Engeza Edeskithophini eduze kwayo, kanye nenkinobho yokususa eduze kweyinye neseyibekiwe.
- Iphaneli yamawijethi uqobo inenkinobho ebonakalayo ethi + Engeza evula okufanayo kokukhetha.
- Iwijethi ngayinye ebekiwe inezinkinobho zayo ezihlala zibonakala zegiya (izilungiselelo) ne-× (susa) — ukuchofoza okulula, hhayi amamenyu afihlekile. Hudula ibha yesihloko sewijethi ukuze uyisuse.

Ikhathalogi: amawijethi esisimu (i-CPU ngomgogodla ngamunye, i-GPU, inkumbulo, inethiwekhi ebukhoma, amazinga okushisa avela ezinzweni zangempela kuphela, isikhala sediski ngamagama — esikhululekile uma kuqhathaniswa nesiphelele ngezinombolo ezicacile namabha, futhi ixwayisa NGAPHAMBI kokuba idiski igcwale — isikhathi sokuvuka, izinqubo eziphezulu), namawijethi okuphakelayo: Isimo Sezulu (amadolobha owabekayo — amaningi ngesikhathi esisodwa, ngalinye iwijethi yalo — akhunjulwa, i-°F noma i-°C, futhi aqotho uma engaxhunyiwe: ukufunda kokugcina kuboniswa kulebuliwe nesikhathi sakho) · Izindaba Ezinkulu (eziyisihlanu eziphezulu, i-ENN kuqala, zakhiwe ngaphandle kokuthengisa ukwesaba: kwenzekeni, kuchazani, wenzeni) · Ibhizinisi · Osaziwayo (izindaba zokuzijabulisa ezihloniphekile kuphela) · Imakethe Yamasheya

(izinkomba ezinkulu kanye nohlu lwakho lokubuka; idatha yangempela, ibhalwe umthombo nesikhathi; uma ungaxhunyiwe idala futhi ibhalwe kanjalo; ulwazi, hhayi iseluleko) · Isikhala (ukuqalisa, imishini, isithombe sezinkanyezi sosuku, kusuka emithonjeni yomphakathi) · Ukuthuthuka Kwezobuchwepheshe (okuqukethwe okufakazelwe kwendlu kokuthuthuka kuqala).

Iwijethi ngayinye ingenziwa ngendlela oyifisayo ngokuphelele — amawijethi api, yiziphi izibalo, indawo, usayizi, umbala nokucaca, isikhawulo sokuvuselela — futhi konke ukuhlelwa kuyakhunjulwa ngokuvuka kabusha. Ukucisha ukucisha: susa iwijethi futhi ihamba; okukhethayo kusabonisa ikhathalogi ephelele.

8 — ARGUS: imephu ephilayo

I-ARGUS ngumlingani oyinhloko wendlu: imephu ephilayo yezimpawu zomphakathi zomhlaba — izindiza, imikhumbi, amasathelayithi, ukuzamazama komhlaba, imililo nezenzakalo zesimo sezulu, amakhamera omphakathi ashicilelwe ohulumeni ukuze umphakathi uwabuke, izintambo, izimakethe, nomugqa phakathi kosuku nobusuku — zidwetshwa ngqo emithonjeni yomphakathi uqobo, umthombo ngamunye ushiwo ngamagama kuphaneli yawo ethi Imithombo.

- I-ARGUS ONLINE isebenza ngokuphakelwa bukhoma, isendlalelo ngasinye sibonisa isikhathi esathathwa ngaso — noma SINDALA uma ukuphakelwa sekudala.
- I-ARGUS OFFLINE isebenza kuphakethe ledatha elihlanganisiwe, yonke into inesitembu sesikhathi esiqotho esithi "kusukela". Igama elithi bukhoma alisoze lavela uma ungaxhunyiwe.
- I-Porch umbono wakho wasekhaya: isibhakabhaka sakho — isimo sezulu endaweni oyibekile, ukuzamazama komhlaba okuseduze kakhulu, izindiza namasathelayithi adlula ngaphezu kwakho. Indawo yakho yasekhaya uyibeka wena, umshini uyayikhumbula, futhi ayisoze yalandelwa noma yathunyelwa ndawo.
- Isendlalelo ngasinye siphendula ngamazwi acacile: ngibukeni, kubaluleke ngani, ngenzeni. Izenzakalo azisoze zathengiswa njengokwesaba.

Isimo selabhu:i-ARGUS iqiqiwe futhi ifakazelwe yodwa — izendlalelo eziku-inthanethi zibukhoma, imodi yangempela yokungaxhumeki ifakazelwe kusukela ekuqaleni kuze kube sekupheleni — futhi iphakheji yayo yokufaka ye-ALPHA ilungile. Ihlala ku-ALPHA kulesi sinyathelo, ngaphambi kokukhululwa kokuqala.

9 — Izibuyekezo nama-Service Pack

Izibuyekezo zifika njengezithombe ezigcwele zesistimu. Uma isibuyekezo sibonakala singenampilo, umshini usibeka eceleni futhi uqale ngokuzenzakalelayo inguqulo yokugcina eyasebenza. Ngemva kokulanda okukodwa okukhulu empilweni yakho, izibuyekezo zifika ngamanani amancane — akusoze kwadingeka ukulanda kabusha uhlelo lonke.

Ukulungiswa kokuphepha kufika ngama-Service Pack anamagama: QUANTUM kuqala, bese ARCHANGEL, bese ECLIPSE. Izinga elimile: lapho kuvumbulula imbobo ebucayi yokuphepha, isichibi esiqinisekisiwe noma ukunciphisa ngamazwi acacile kufika ngezinsuku — inhloso yethu amahora angama-72 kusukela ekuvumbululweni — futhi isikhathi esisetshenzisiwe sishicilelwa esidlangalaleni, kuhlanganise nokwehluleka. Iphakeji ngalinye linesibuyekezo esibhalwe ngamazwi acacile (yini etholakele, yini eyayisengozini, yini eshintshile), liqinisekiswe nge-hash, futhi liphephile ukubuyela emuva.

I-Enclave Wash ukusetha kabusha okujulile: kubuyisela umshini ku-ALPHA OS ehlanzekile, entsha sha — ukuze uqale phansi, udlulisele komunye, noma ululame osukwini olubi. Ichaza ngamazwi acacile ngaphambi kokuthinta lutho, futhi uqala ngokuthumela amafayela akho kuqala. Njalo.

10 — Usizo, lapho ume khona

Usizo luhlala ezindlini ezimbili ezivela emthonjeni owodwa, ngakho abusisoze lwapikisana. Ngaphakathi kwe-ALPHA OS, uhlelo Losizo olwakhelwe ngaphakathi luphethe usizo oluseshekayo nezifundo zesinyathelo ngesinyathelo — ngaphandle kwe-inthanethi ngokuphelele, ngoba usizo oludinga i-inthanethi luyohluleka ngqo lapho usuvele usenkingeni. Kuwebhu, usizo olufanayo lume ekhasini le-ALPHA OS ku-777software.net, eduze kwale ncwadi. Futhi kulo lonke uhlelo, izincazelo zichaza inketho ngayinye ngamazwi acacile.

11 — Ukuxazulula izinkinga

- Umshini awuvuki ngemva kwesibuyekezo: ungajahi lutho. I-ALPHA OS igcina inguqulo yangaphambilini; uma entsha ibonakala ingenampilo, umshini uyayibeka eceleni futhi uqale inguqulo yokugcina eyasebenza. Uma ukukhetha kuboniswa ekuvukeni, khetha okufakiwe kwe-ALPHA OS okudala.
- Ukhohlwe iphasiwedi yakho: iphasiwedi yakho ngeyakho wedwa — lendlu ayikwazi ukuvula umshini wakho, futhi ayikho indlela yangemuva yokwenza lokho. Leyo yintengo eqotho yomshini olalela wena ngempela. Setha iphasiwedi ongayikhumbula, futhi uyigcine endaweni ephephile ekhaya.
- Umnyango okude awuxhumi: hlola ukuthi umshini uvuliwe futhi uvukile; hlola ukuthi womabili amadivayisi asenethiwekhini; hlola ukuthi ufaka ikheli ngqo; nge-QDESK, hlola i-PIN. Wonke umnyango udinga umshini ofinyelelekayo kanye nokungena kwakho okulungile — izinyathelo ezintathu, ngokulandelana.
- Akukho msindo eseshini ekude: i-VNC ayithwali msindo ngomklamo — sebenzisa i-QDESK noma i-RustDesk. Umsindo we-RDP uyigebe elishiwo ngamagama ekwakhiweni kwamanje kwelabhu (bheka Isigaba 5). Futhi hlola ivolumu yesivakashi sakho: iseshini iqala ezingeni elifanele, elingathuliswanga.

- Idiski iyagcwala: iwijethi yediski ixwayisa ngaphambi kokuba idiski igcwale, hhayi ngemva kwalokho. Izisekelo ngokuvamile ziyisisindo: vula Isikhungo Sezokuphepha, funda usayizi wesikisekelo ngasinye, bese ulahla lezo ozikhethayo — akukho lutho olusoze lwasuswa ngaphandle kokuzibandakanya kwakho.
- Uhlelo aluvuli: bhala phansi igama lwayo nalokho isikrini esikushoyo ngamazwi acacile, bese ubheka ikhasi lolo hlelo kuhlelo Losizo. Uhlelo ngalunye lwendlu lubhala ukuziphatha kwalo phansi; umyalezo ongawezwisisi, ngokomthetho wendlu, uyiphutha — sibhalele kusuka kuwebhusayithi usitshele ukuthi utheni.

12 — Lokho i-ALPHA OS engakwenzi

- Ayidali ama-akhawunti, ayiqoqi ukulandelela, ayibiki ndawo. Ayikho indawo yokubika kuyo: i-777 Software ayiphethi lutho.
- Ayithembisi ukusebenzisa lonke uhlelo lwe-Windows noma lwe-Android. Ukuhambisana kuhlelo ngalunye: okuningi, akusoze kwaba konke.
- Ayithi ayinakuphulwa, futhi ayisoze yakusho lokho. Ithembisa ubufakazi esikhundleni sezithembiso: izakhiwo ezihloliwe, izindlela ezivulekile, ukuqapha okuqhubekayo kokuba sengozini, nama-Service Pack anezikhathi ezibekwe esidlangalaleni.
- Ayisusi amafayela akho — hhayi ekusetheni kabusha, hhayi ekubuyiseleni emuva, hhayi ekubanjelweni, akusoze. Ukulahlwa njalo kuyisinqumo somsebenzisi.
- Ukukhululwa kokuqala kwe-firewall kuyabuka futhi kuyabonisa; akukavimbeli. Lapho ukuvimbela kufika, ibhodi lizokusho. (Isigaba 7.)

13 — Amakhredithi

777 Software — yaqanjwa nguKim Jesse. ALPHA OS — igama layo nalo liwukukhetha kukaKim.

UMsunguli noMklami: Steven Aaron Jesse. Umsizi Omkhulu Womklami: Charles Burnett (Brother Zero).

Lendlu yaqala ngo-February 17, 2026 — ezinsukwini ezintathu ngemva kokudlula kukadadewabo womsunguli uDonna — nge-Python script eyodwa nokwenqaba ukuyeka. Konke kusukela lapho kume phezu kwalokho.

I-ALPHA OS nale ncwadi mahhala kuze kube phakade. Uma le ncwadi ikusizile, idlulisele phambili: inguqulo entsha ihlala ku-777software.net/alpha-os/ — yithathe, wabelane ngayo, futhi usibambele kuwo wonke amagama akuyo.
